Labels for all purposes

Labels are high-performance products essential for various industries. Billions of self-adhesive labels are used daily for data capture, company branding, and logistics in production and manufacturing. These labels serve multiple purposes, including tracking and tracing goods, optimizing workflows, identifying and branding products, and providing consumers with important information. Each product comes with unique demands, requiring labels to adapt accordingly.

Labels play a critical role across industries, whether serving as routing barcodes on postal items or being used for the long-term identification of vehicle components that must remain intact and legible for years. From blank labels for post-printing to product information labels and brand labels with sophisticated graphic designs, Silvassa Woven Sacks Label Solutions offers a comprehensive range of labels to suit any application or environment, ensuring functionality and quality every step of the way.

Materials and production management for top results

Our air-conditioned pharma-grade facility ensures that your labeling needs are met with precision, speed, and cost-effectiveness. With considerable production capacity and high flexibility, we provide tailored solutions for any combination of label material and adhesive to suit specific application prerequisites. Our extensive range of punch and print cylinders and AVT inspection machines minimizes the time between order and delivery, keeping costs low. Additionally, thousands of tools in a variety of shapes are available, with new additions being made weekly, ensuring unparalleled efficiency and quality.

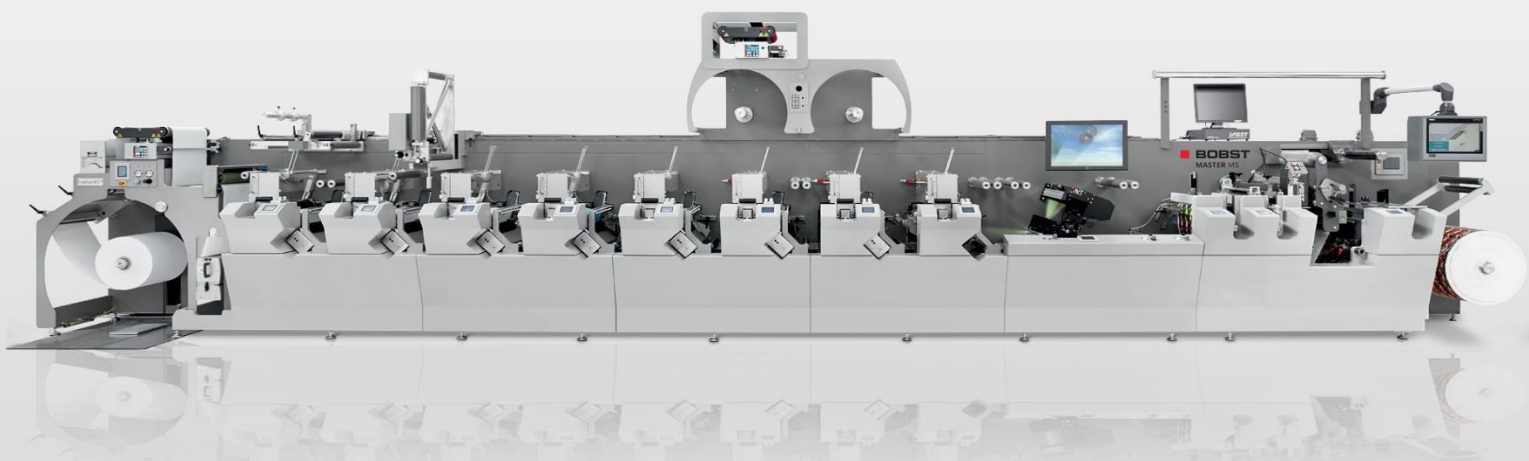

We guarantee maximum care and precision in the production of your labels. Our in-house Labelling Specialists are worked to the highest standards possible and are trained to the highest degree in Labelling and Adhesive Technology

Millions of blank and pre-printed labels are produced in daily 3-shift operation. Our high production capacities and flexibility will ensure that your requirements for labels will be met quickly and cost-effectively. Our Stock Label programme guarantees immediate delivery.

Our modern BOBST M5 8-colour printing machine produce top quality printed labels to perfectly match your particular product design. On request, we can furthermore assist you with customised proposals for layout. We can also manufacture your label volumes in bulk and store these to be available to you as you need them. Our production facility can manufacture any label format up to 407 mm wide and 330 mm in length. The result: labels of tried and tested quality, supplied on schedule.

Industry-wide application

We can offer you numerous labelling solutions to perfectly match your application. Label materials and adhesives are constantly improving through our innovations. Talk to us – we know the market better than most!

Self-adhesive label with special adhesive for labelling of tyres

Self-adhesive identification labels for gardening

Other examples in industry

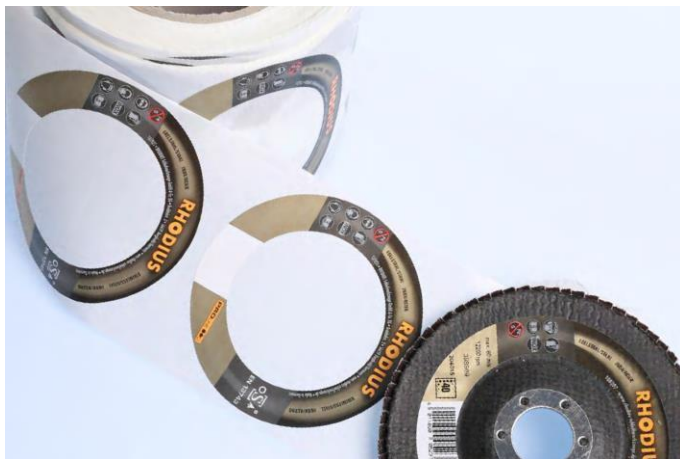

- Tear-resistant retail trade display labels
- Solvent-resistant labels for the automotive industry
- Barcoded pricing labels
- Security labels for police and authorities
- Acid-proof labels for the chemical industry
- Watersoluble labels for laboratories, clinics and breweries

Self-adhesive pre-printed labels for bio products

Self-adhesive pre-printed label for health products

Self-adhesive, punched tag label for tools

Self-adhesive brand label for ceramics

Cardboard tag for fruit and vegetables

Self-adhesive shape-punched label for pasta

Label Application Types

- Multi-colour printed labels

High-quality labels will enhance your product. Meticulously produced to your design and specifications. Label dispensers apply the labels automatically and consistently.

- Pre-printed labels

Many sectors of industry require labels with frequently changing text. The labels are pre-printed in colour and the variable data are printed on site, "just in time" without a problem, using label printers or print dispensing systems.

- Blank Stock labels

These are the basic label stocks used for marking in all sectors to ensure traceability and documentation of products and packaging. Blank labels are subsequently marked using the thermal direct or thermal transfer process.

- Durable and Security labels

These may be water, oil, grease or heat resistant, depending on requirement, also meeting requirements for shelf life and durability, as needed. Safety and counterfeit-proof labels help manufacturers ensure product traceability

Our production uses virtually 100% environmentally friendly inks for printing. The large selection of label materials assures the end customer of mono-material recycling, e.g. by using PE labels on PE products. Many tons of silicone-coated carrier paper are collected each year and passed on for recycling, corresponding to a reduction in CO₂ emissions.

Coloured labels

Brands and high-quality products need suitably matching labels to express their image and reflect their brand statement. We have facilities for the production of high-grade colour labels for any application. Up to 8 colours may be printed in UVflexoprint, in all conventional sizes and colours and with the appropriate adhesive. Allow us to inspire you.

Pre-printed labels

Industry needs labels with frequently changing text and with colours to attract additional attention or to signal warnings, e.g. in the chemical industry. This is where pre-printed colour labels are used. We produce top quality, pre-printed colour labels for any application – also partially printed as required, e.g. showing the company logo.

Customised printing will follow later, possibly with variable data such as serial numbers, descriptions, weight info, ingredients etc.

Blank labels

Blank labels are used for documentation and tracking in all industries and in logistics. Relevant labels are marked by the thermal direct or thermal transfer method. We can offer you a broad spectrum of label types, ensuring that you will always find those properties which optimally match your requirements. These include, for instance, UV light resistant, waterproof, recyclable and solvent-free labels and much more.

Special and safety labels

No-label look, scented labels, indicator labels, scratch labels, water soluble labels, safety labels, laminated labels: Special labels by Silvasa Woven Sacks satisfy a diversity of requirements and may have many special features, depending on their purpose.

We are also active in RFID – the market of the future. We can offer RFID labels and innovative dispensing systems. Be it product traceability for quality assurance, tracking and tracing in logistics or individual product marking for just-in-time production: we can offer you customised solutions to optimise your business operations.
